

SUMMARY:

- With 8+ years of experience in designing, building, and maintaining scalable, high-performance backend systems using **Java 17+, Spring Boot, RESTful APIs, Microservices**, and **cloud-native architectures**, ensuring reliability, responsiveness, and secure enterprise deployments.
 - Progressed from Data Analyst to Data Scientist, delivering **Production ML and Generative AI Solutions** using **XGBOOST, Random Forest, Gradient Boosting, ensembles, PyTorch, and Transformers** for risk scoring, personalisation, forecasting, anomaly detection, and customer segmentation with measurable business impact.
 - Proven experience building and scaling **big data and real-time ML pipelines** using **Apache Spark (PySpark, Spark SQL, Streaming)** and cloud ML ecosystems with AWS SAGEMaker, EMR, Glue, Redshift, Athena, Lambda, with strong emphasis on feature engineering, model monitoring, and governance.
 - Strong background in **SQL DATABASES, performance tuning, system troubleshooting, network fundamentals**, and CI/CD workflows, with hands-on experience in **Agile DevOps**, code reviews, automation, AI-assisted development tools, and continuous improvements.
 - Advanced understanding of **Banking and Financial industry standards**, distributed system scalability, and dependency management, combined with a commitment to high-quality, sustainable, and energy-efficient system design, continuous learning, and enterprise best practices.
-

TECHNICAL SKILLS:

- **Programming, Development & API:** Python, Java (Java 17+), R, HTML5, CSS3, JavaScript, React, [Node.js](#), [Vue.js](#), Angular, Flask, Fast API, Spring Framework, Spring Boot, RESTful API Design, Microservices Architecture, Advanced Excel.
 - **ML, Statistics & Data Science:** Scikit-Learn, XGBoost, LightGBM, Random Forest, Gradient Boosting, SVM, KNN, Naive Bayes, Logistic & Linear Regression, Decision Trees, K-Means, Hierarchical Clustering, PCA, t-SNE, Hypothesis Testing, A/B Testing, Regression Analysis, EDA, StatsModels, SciPy, ARIMA, Prophet, Feature Engineering, Hyperparameter Tuning, Cross-validation, Ensemble Methods, SHAP, LIME.
 - **Deep Learning & Neural Networks:** Tensorflow, PyTorch, Keras, CNN, RNN, Transformer Models, Transfer Learning, Autoencoders, Attention Mechanisms, Adam, SGD, Dropout, Batch Normalisation.
 - **Large Language Models & Generative AI:** Fine-tuning, Prompt Engineering, LangChain, Retrieval-Augmented Generation (RAG), FAISS, Pinecone, Milvus, Chroma, Hugging Face transformers.
 - **Big Data, Distributed Computing:** Apache Spark, Kafka, Databricks, ETL/ELT Pipelines.
 - **Databases & Storage:** PostgreSQL, MySQL, Amazon Redshift, MongoDB, Neo4j, Redis.
 - **Cloud Platforms & Infrastructure:** AWS(EC2, S3, Lambda, SageMaker, Kinesis, Athena, CloudWatch, IAM, API Gateway), BigQuery, Dataflow, Terraform, Apache Airflow.
 - **MLOps, Deployment:** MLflow, Model Versioning, Experiment Tracking, Feature Stores, FastAPI.
 - **CI/CD:** Git, GitHub Actions, Jenkins.
 - **Data visualisation & Business Intelligence:** Power BI, Looker, Tableau, Matplotlib, Seaborn, [D3.js](#).
 - **IDEs & Notebooks:** Jupyter Notebook, VS Code, Google Colab, PyCharm, IntelliJ, DataGrip.
 - **Agile Delivery & Engineering Excellence:** Agile/Scrum Methodologies, Code Reviews, Continuous Improvements.
 - **Documentation:** Docstrings (NumPy / Google Style), MLflow tracking (Experiment & Model Documentation)
-

PROFESSIONAL EXPERIENCE:

A V ENTERPRISE INC., GA, USA

ROLE: Data Scientist

MAR, 2025- PRESENT

- **Architected and delivered scalable backend and Gen AI platforms** by building high-performance Java (17+) and Spring Boot microservices integrated with ML/Gen AI pipelines for unstructured document intelligence, including classification, entity extraction, and domain-specific language models.
- **Designed and productionised Retrieval-Augmented Generation (RAG) Systems** leveraging semantic embeddings, vector databases, and RESTful APIs to enable low-latency semantic search, grounded LLM responses, and reliable enterprise-grade AI services.
- Built and governed enterprise **data, ML and Cloud pipelines on Azure**, supporting OCR and unstructured data ingestion, feature engineering, validation, and performance-optimised database connectivity while ensuring scalability, resilience, and service-level reliability.

- Ensured system reliability, performance, and explainability by recognising bottlenecks across distributed services, implementing **model interpretability (SHAP/LIME)**, **A/B testing**, **drift detection**, and **automated monitoring** aligned with production SLAs and financial industry standards.

AMITI CONSULTING SERVICES, VA, USA

ROLE: Software Engineer

JULY, 2024-FEB,2025

- Designed, built, and operated scalable backend and microservices architectures using **Java, Spring Boot, RESTful APIs, SQL Databases, and cloud-native services such as Azure**, ensuring high performance, reliability, security, and compliance within financial-grade distributed systems.
- Developed and production intelligence **AI/ML and GenAI solutions**, including **document intelligence,RAG, anomaly detection, and predictive models, leveraging semantic embeddings, vector search, transfer learning, and time-series modeling** to outperform legacy rule-based systems.
- Engineered end-to-end data and ML pipelines for structured, semi-structured, and unstructured data (OCR, text, telemetry, reports) using **Python, SQL, PySpark, and distributed systems**, owning feature engineering, data validation, quality controls, and performance optimisation at enterprise scale.
- Ensured the model, system, and application reliability by implementing robust **MLOps and DevOps practices - CI/CD Pipelines, automated testing, monitoring, drift detection, explainability (SHAP/LIME), A/B Testing, and SLA-aligned retraining workflows**, while troubleshooting complex, interconnected environments.
- Led cross-functional collaboration and governance initiatives, partnering with product, compliance, and domain teams to define **Responsible AI Standard**, sustainable and energy-efficient system design, code quality automation, and continuous improvement within Agile Delivery using Azure DevOps.

B4B IT SOLUTIONS PVT LTD, TG, INDIA

ROLE: Web Developer (Data Analyst)

OCT, 2018-JAN,2022

- Architected and maintained scalable cloud-native solutions, leveraging **Java** for microservices and **Spark SQL/Python** for data processing to achieve optimal system responsiveness.
- Optimised the end-to-end data lifecycle, deploying **Google Dataflow** and **Spark Solutions** to slash data errors by **35%** while increasing query throughput by **25%** across relational and distributed databases.
- Reduced manual reporting by **40%** through the development of **Spring Boot and Flask APIs**, facilitating seamless data integration between backend systems and BI platforms such as **Looker, Tableau, and Power BI**.
- Spearheaded the development of risk analytics models within the **financial and healthcare domains**, utilising **Scikit-learn** and Statistical modeling to automate fraud detection and drive data-informed decision-making.
- Collaborated in **Agile** environments to deploy and tune Azure microservices, driving engineering excellence through CI/CD automation, performance optimisation, robust distributed system troubleshooting.

YOURNEEDS.ASIA, TG, INDIA

ROLE: Web Developer

DEC,2015-DEC,2017

- Engineered scalable backend ecosystems from design to deployment using **Java 17 and Spring Boot**, prioritising security and high-availability architecture within a cloud-native framework.
- Partnered with cross-functional teams to architect and deploy scalable **Angular frontend and Node.js backends**, driving continuous improvement in user experience and system responsiveness.
- Reduced deployment errors and increased release velocity by automating end-to-end build and test workflows with **Azure DevOps and Jenkins**, maintaining rigorous engineering standards for cloud-native applications.
- Engineered end-to-end data solutions using Python and SQL to drive enterprise decision-making, transforming raw data into actionable insights through robust **ETL Pipelines and interactive Tableau/Power BI dashboard**.
- Improved system scalability and reliability by resolving distributed bottlenecks and optimised **SQL performance**, utilising **AI tools** and sustainable practices to streamline operations.

IIC SERVICES (INDIA) PVT LTD, TG, INDIA

ROLE: Jr. Software Engineer

JULY, 2013-JULY, 2015

- Full-lifecycle backend developer with expertise in **Java, Python, and Node.js**. Proven track record of building and maintaining enterprise-grade APIs and services that drive performance and reliability for large-scale e-commerce and retail platforms.
- Facilitated seamless system interpretability by developing **robust APIs and microservices**. Managed the end-to-end integration of payment systems and third-party tools while maintaining a secure, high-performance cloud ecosystem on Azure.

- Boosted database responsiveness by 30% by engineering high-performance **SQL** and **PL/SQL** across **MySQL, PostgreSQL, and Oracle**. Proven expertise in maintaining robust database connectivity and integrity within distributed system frameworks.
 - Streamlined end-to-end delivery pipelines, integrating automated ETL Processing and containerised workflows to ensure high-quality, rapid software releases. Expertise in **Azure DevOps and Jenkins** allowed for a significant reduction in deployment defects and manual processing time.
-

EDUCATION:

- **Master of Science in Data Science**

University of Alabama at Birmingham

April 2024

- **Bachelor of Technology in Electronics and Communication Engineering**

Annamacharya Institute of Technology and Sciences (Affiliated by JNTU(H))

May 2013

PROJECTS:

- **ONLINE FRAUD DETECTION:** Developed fraud detection system using Random Forest and XGBoost on financial Data; planned Deep Learning integration for real time analysis. (Python, Scikit-Learn, TensorFlow, Keras, Pandas, NumPy, SQL).
 - **SALES DATA ANALYSIS:** Analysed sales trends for revenue optimisation and efficiency gains. (Excel, SQL, Python, Pandas, NumPy, Power BI/Tableau, CRM)
 - **MONKEY SPECIES DETECTION:** Built CNN with 99% accuracy for classifying 10 monkey species using transfer learning. (Python, Tensorflow/ Keras, NumPy, OpenCV, Scikit-learn, Matplotlib).
 - **PREDICTING 30-DAY HOSPITAL READMISSION:** Created ML model on clinical data for risk prediction and improved patient outcomes. (Python, Scikit-Learn, pandas, NumPy, Matplotlib, Seaborn, XGBoost)
-

CERTIFICATIONS:

- Looker Data Skill Badge [[Looker Data for Visualizing](#)].
- BigQuery Data Skill Badge [[BigQuery](#)] .
- Manage Data Models in Looker Skill Badge [[DataModels with Looker](#)].
- Introduction to SQL [[Kaggle](#)].
- Python [[Kaggle](#)].
